

Apps for the Conscientious Individual

It's important that your life be in line with your values. In other words, it's important to practice what you preach. A student like you, who is concerned about population-related issues, can do a lot on a daily basis to make a change. Download these apps to get you started!

[Oroeco](#) tracks your carbon footprint and gives you tips on how to reduce your impact on the environment (and how to save money while doing it!) You can also support various carbon offset projects.

[Countable](#) –The app tracks your location and gives you a description (in plain English) of the next piece of legislation that your representatives will be voting on. It then gives you the option to email your representative, look at the related media, or even pull up the entire text of the bill. Countable keeps track of how your representatives voted versus how you wanted them to vote.

[#Climate](#) offers examples of actions that you can take to tackle climate change. When creating a profile on the app, you can select the topics that you're most passionate about. This way, the suggested actions will be personalized for you.

[Skeptical Science](#) lists several of the arguments made by climate change skeptics and then gives you a counterargument, these often include graphs and links to scientific papers.

[GoodGuide](#) guides you in your consumer decisions by rating products on their scientific ratings in different categories like environmental health impacts and human health impacts. It offers alternatives to products that have low ratings.

[Images of Change](#) is an app developed by NASA to show how Earth's surface is changing. It shows satellite images of places in the past and today to easily see and visualize how the Earth is changing due to human activity and natural disaster. The images are collected from NASA's Global Climate Change website.
